CheckPoint®, the original commercial loose wheel nut indicator is a simple and cost effective product that can guard against a potential catastrophic loss caused by loose lug nuts.

When fitted on properly torqued wheel nuts and inspected by a driver or technician, the Checkpoints clearly and visually indicate if the wheel nuts have moved. If the arrows have moved from the fitted pattern, this indicates that they have loosened and need attention. Checkpoint doesn't prevent bolt shear, but is important as part of a total wheel torque program to prevent loose lug nuts.

Why use Checkpoint Products?

- Enhanced fleet safety management
- Facilitates the driver's check for wheel nut movement and his involvement with vehicle safety
- Demonstrates on the road, your fleet commitment to vehicle road worthiness and vehicle safety
- Early warning for mechanic or driver of possible brake or bearing problems
