Having Trouble Inflating Your Dually Tires?

Hard to Reach?

Pointing Inward?

- No More Braided or Rubber Extensions that Leak.
- No More Rubber Based Valve Stems.
- No More Crawling to Locate the Inner Valve Stem.

Duallyvalve Stems are the Solution!

Since 2005 Duallyvalve Stem kits have made it easier for Dually Wheel Owners & Operators to check and maintain Tire Pressure on those hard to reach valve stems in dual wheels.

Duallyvalves are Replacement 1-piece Bolt-In, All Metal Valve Stems. Duallyvalve stems replace your existing short metal or rubber based valves & rigid or flexible screw-on extensions. For Class A, B & C Motorhomes, Buses, Dually Trucks & Emergency Vehicles.

What makes Duallyvalves different than extensions is the following... The length of the Inner Dual Valve Stem has been extended to reach through to the outer Dual wheel.

A Stabilizer is included in most kits which goes in the Hand-Hole of the outer Dual Wheel, and supports the end of the long Inner Dual Valve Stem. The kit also includes Outer Dual stems that are curved (U-shaped) making it easy to add air to both.

Duallyvalve kits are specific to your vehicles Year, Chassis, Wheel Size, Wheel Type & Hand-Hole Size & Shape. See the full Application Chart to help determine the correct kit.
